

SYSTEM AND METHOD FOR CONFIGURING COMPUTER APPLICATIONS AND DEVICES USING INHERITANCE

ABSTRACT OF THE DISCLOSURE

A system and method using inheritance for the configuration, management, and/or monitoring of computer applications and devices via a computer network are disclosed. The method generally comprises determining a hierarchical tree structure based upon locations of devices in a network topology, each device being a node in the hierarchical tree structure, determining policies for each node in the hierarchical tree structure to be enforced by an agent corresponding to each node, the agent being in communication with the device and the resources corresponding to the device, and communicating the policy to the corresponding agent, wherein the policies corresponding to the resources of each device are selectively inherited along the hierarchical tree structure of the network directory.
